JumpStart® Antimicrobial Wound Dressings

Extend Infection Control Beyond the Operating Room

JumpStart® dressing is an advanced microcurrent-generating antimicrobial bandage designed to support wound healing and provide broad-spectrum antimicrobial protection, including protection against antibiotic-resistant bacteria.[1]

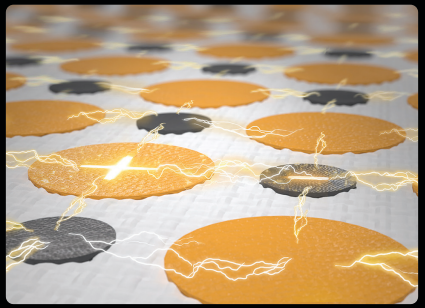

Arthrex® Vet Systems

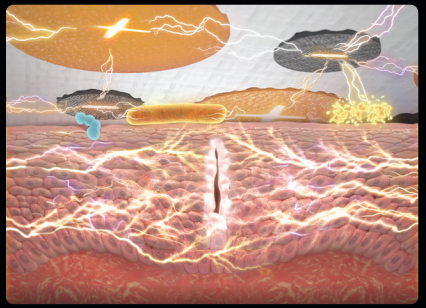

Inspired by the Body

The skin naturally creates and uses electrical energy to promote healing. Electrical fields within the skin generate surface energy potential, known as transepithelial potential (TEP). When skin is wounded, a change in electrical potential occurs, driving cell migration and wound healing process.[2]

Powered by Electricity

JumpStart® antimicrobial wound dressings employ moisture-activated technology that generates physiologic levels of microcurrent (10-50 µA), designed to mimic the skin's electrical energy that is known to play a critical role in healing.[2,3]

Energized by Results

JumpStart dressings reduce the risk of infection from a broad spectrum of bacteria without antibiotics while supporting the body's natural healing process. Published studies show that JumpStart dressings help reduce the risk of infection and support healing to optimize outcomes.[1,2,4-6]
